

51"

Insure your swing is mounted to framing of sufficient structural integrity. A single 2x6 joist is not enough.

The green swivel mounting brackets fascilitate the swinging motion. Their use is determined by the installer's discretion.

The heavy duty springs provide a cushioned foregivness. While the swivel mounts and the springs are not technically necessary (a simple I-bolt or lag linked directly to the chain will work), they *do* provide a more comfortable experience.

Swings come with extra length of chain that can be snipped using bolt cutters.
